

Contents

1 Knowledge and Logic

- 1.1 Knowledge
- 1.2 Logic
- 1.3 Ignorance
- 1.4 Decisions

2 Bayes' Theorem

- 2.1 Derivation of the Theorem
- 2.2 Transformations
- 2.3 The Concept of Form Invariance
- 2.4 Many Events
- 2.5 Improper Distributions
- 2.6 Shannon Information

3 Probable and Improbable Data

- 3.1 The Bayesian Interval
- 3.2 Examples
 - 3.2.1 The Central Value of a Gaussian
 - 3.2.2 The Standard Deviation of a Gaussian
- 3.3 Contour Lines
- 3.4 On the Existence of the Bayesian Area

4 Description of Distributions I:

Real x

- 4.1 Gaussian Distributions
 - 4.1.1 The Simple Gaussian
 - 4.1.2 The Multidimensional Gaussian
 - 4.1.3 The Chi-Squared Model
- 4.2 The Exponential Model
- 4.3 Student's t -Distribution

5 Description of Distributions II:

Natural x

- 5.1 The Binomial Distribution
- 5.2 The Multinomial Distribution
- 5.3 The Poisson Distribution

6 Form Invariance I

- 6.1 Groups
- 6.2 The Symmetry of Form Invariance
- 6.3 The Invariant Measure
- 6.4 The Geometric Measure
- 6.5 Form Invariance of the Posterior Distribution
- 6.6 The Maximum-Likelihood Estimator
- 6.7 The Sufficient Statistic
- 6.8 An Invariant Version of the Shannon Information

7 Examples of Invariant Measures

- 7.1 Form Invariance under Translations
- 7.2 Form Invariance Under Dilations
- 7.3 Form Invariance Under the Combination of Translation and Dilation
- 7.4 A Rotational Invariance
- 7.5 Special Triangular Matrices
- 7.6 Triangular Matrices

8 A Linear Representation of Form Invariance

- 8.1 A Vector Space of Functions
- 8.2 An Orthogonal Transformation of the Function Space

- 8.3 The Linear Representation of the Symmetry Groups
- 8.4 The Linear Representation of Translation
- 8.5 The Linear Representation of Dilation
- 8.6 Linear Representation of Translation Combined with Dilation

9 Going Beyond Form Invariance:

The Geometric Prior

- 9.1 Jeffreys' Rule
- 9.2 Geometric Interpretation of the Prior μ
- 9.3 On the Geometric Prior Distribution
- 9.4 Examples of Geometric Priors
 - 9.4.1 An Expansion in Terms of Orthogonal Functions
 - 9.4.2 The Multinomial Model

10 Inferring the Mean or the Standard Deviation

- 10.1 Inferring Both Parameters
 - 10.1.1 Multidimensional Gaussian Approximation to a Posterior Distribution
- 10.2 Inferring the Mean Only
- 10.3 Inferring the Standard Deviation Only
- 10.4 The Argument of Neyman and Scott against ML Estimation

11 Form Invariance II: Natural x

- 11.1 The Binomial Model
 - 11.1.1 The Basic Binomial Model
 - 11.1.2 The Binomial Model for N Observations
- 11.2 The Poisson Model as a limit of the Binomial Model for $N \gg n$
 - 11.2.1 The Prior and Posterior of the Poisson Model
 - 11.2.2 The Poisson Model is Form Invariant

12 Item Response Theory

- 12.1 The Idea of and Some Notions akin to Item Response Theory
- 12.2 The Trigonometric Model of Item Response Theory
- 12.3 Analysing Data with the Trigonometric Model
 - 12.3.1 The Guttman Scheme
 - 12.3.2 A Monte Carlo Game
- 12.4 The Statistical Errors of the ML Estimators of Item Response Theory

13 On the Art of Fitting

- 13.1 General remarks
- 13.2 The Chi-Squared Criterion
- 13.3 A Histogram of Counts
- 13.4 The Absolute Shannon Information
 - 13.4.1 Definition of the Absolute Shannon Information
 - 13.4.2 The Shannon Information Conveyed by a Chi-Squared Distribution
 - 13.4.3 Assigning Effective Numbers of Freedom

14 Summary

- 14.1 The Starting Points of the Present Book
- 14.2 Results
- 14.3 Open Questions

Appendix A: Problems and Solutions

Appendix B: Description of Distribution I: Real x

Appendix C: Form Invariance I

Appendix D: Beyond Form Invariance: The Geometric Prior

Appendix E: Inferring Mean or Standard Deviation

Appendix F: Form Invariance II: Natural x

Appendix G: Item Response Theory

Appendix H: On the Art of Fitting
